## 4. Chapter: Pesticides/Small animal poison Test

### 1. Pesticides/Small animal poison Test Questions

#### 4.1.1. Inhibition of acetylcholinesterase (AChE) is the mechanism of actio...

Author: Brooke Delaney

Inhibition of acetylcholinesterase (AChE) is the mechanism of action of which pesticide?

Please choose only one answer:

- Organochlorines
- Pyrethrins
- Organophosphates
- Rotenone
- Fipronil

Check the answer of this question online at [QuizOver.com](http://www.quizover.com):

Author: Brooke Delaney

Which of the following is considered treatment for organophosphate but cannot be used for carbamate poisoning?

Please choose only one answer:

- Atropine Sulfate (muscarinic antag)
- 2 - PAM
- Gastric Lavage
- activated charcoal
- All can be used to treat both organophosphates and carbamate poisoning

Check the answer of this question online at [QuizOver.com](http://www.quizover.com):

#### 4.1.5. What is the specific antidote for organochlorine exposure?

Author: Brooke Delaney

What is the specific antidote for organochlorine exposure?

Please choose only one answer:

- Atropine sulfate
- 2- PAM
- Methylene Blue
- Physostigmine
- There is no specific treatment for organochlorines

Check the answer of this question online at QuizOver.com:

#### 4.1.6. Which of the following statements regarding organochlorines is FALSE?

Author: Brooke Delaney

Which of the following statements regarding organochlorines is FALSE?

Please choose only one answer:

- Toxicity is neurological
- Organochlorines are highly persistent and bioaccumulate
- Chronic organochlorine exposure can lead to eggshell thinning and reduced fertility in birds
- Mechanism of action is either by inhibition of Na<sup>+</sup> influx and K<sup>+</sup> efflux or inhibiting GABA receptors
- Organochlorines are highly volatile and exposure is most likely via inhalation

#### 4.1.7. Which of the following statements is TRUE regarding Pyrethrins and ...

Author: Brooke Delaney

Which of the following statements is TRUE regarding Pyrethrins and Pyrethroids?

Please choose only one answer:

- Pyrethrins and Pyrethroids are rapidly hydrolyzed and metabolized with majority eliminated 12-24hrs.
- Inhalation exposure of Pyrethrins and Pyrethroids is low
- Pyrethrins and Pyrethroids are hydrophilic in nature and do not distribute in fat or nervous tissue
- Mammalian Na<sup>+</sup> channels are 1000x more sensitive than the insect counterpart
- Cats do not have adverse reactions to Pyrethrins and Pyrethroids because they are a more intelligent species and know not to lick this product off a dog.

#### 4.1.9. What is the mechanism of action of Fipronil (Frontline)?

Author: Brooke Delaney

What is the mechanism of action of Fipronil (Frontline)?

Please choose only one answer:

- Fipronil inhibits the oxidation of NADH to NAD<sup>+</sup> which leads to an energy deficiency in cells.
- Fipronil binds to the membrane lipid phase near the Na<sup>+</sup> channel.
- Fipronil inhibits Na<sup>+</sup> influx and K efflux
- Fipronil noncompetitively binds GABA receptors and blocks Cl<sup>-</sup> influx
- Fipronil is an AchE inhibitor

Check the answer of this question online at QuizOver.com:

Author: Brooke Delaney

Amitraz is an alpha 2 agonist of the CNS which results in sedation. Which drug would be used to treat Amitraz poisoning?

Please choose only one answer:

- atropine sulfate
- yohimbine
- 2- PAM
- atipamezole
- Both yohimbine and atipamezole

Check the answer of this question online at QuizOver.com:

#### 4.1.15. Which of the following statements is False regarding Bromethalin?

Author: Brooke Delaney

Which of the following statements is False regarding Bromethalin?

Please choose only one answer:

- uncouples oxidative phosphorylation in mitochondria thus depleting ATP
- highly lipophilic with brain and fat having high concentrations
- causes a buildup of Vit D3 metabolites which causes an increase in plasma Ca<sup>+</sup> and P<sup>+</sup>
- developed for use against warfarin resistant rodents
- secondary poisoning can occur in dogs and cats that eat rodents killed by Bromethalin

#### 4.1.16. Strychnine (gopher bait) causes arched back and neck (opisthotonos)...

Author: Brooke Delaney

Strychnine (gopher bait) causes arched back and neck (opisthotonos) and convulsions. What is the mechanism of action?

Please choose only one answer:

- uncoupled oxidative phosphorylation
- inhibits GABA receptors
- inhibits Na<sup>+</sup> influx and K<sup>+</sup> efflux
- inhibits acetylcholinesterase (AChE)
- inhibits glycine on anterior horn of spinal cord and endogenous transmitter release at Renshaw cells.

Check the answer of this question online at QuizOver.com:
